Report Overview

The 1536-well microplate is a high-density laboratory tool used primarily in drug discovery, high-throughput screening (HTS), and life sciences research. It allows for the simultaneous testing of 1,536 samples in a single plate, significantly increasing throughput while reducing reagent consumption and operational costs compared to lower-density formats like 96-well or 384-well plates. These microplates are typically made from polystyrene or polypropylene and feature standardized dimensions to ensure compatibility with automated liquid handling systems and microplate readers. Their design enables miniaturized assays, making them ideal for screening large compound libraries, genomic studies, and cellular assays. The demand for 1536-well microplates is driven by the pharmaceutical and biotechnology industries' need for efficient, cost-effective solutions in drug development, particularly in early-stage research where scalability and precision are critical. Advances in automation and assay miniaturization have further solidified their role in modern laboratories.
