### Report Overview

2-Ethylhexyl Alcohol (2-EHA), also known as 2-ethylhexanol, is a branched-chain fatty alcohol primarily used as a chemical intermediate in the production of plasticizers, solvents, and surface-active agents. It is a colorless, viscous liquid with a mild odor, widely employed in the manufacturing of dioctyl phthalate (DOP) and other phthalate-based plasticizers, which are essential in softening PVC for applications such as cables, flooring, and automotive parts. Additionally, it serves as a precursor in the synthesis of lubricant additives, coatings, and adhesives, as well as a solvent in printing inks and cosmetics. The growing demand for PVC products, particularly in construction and automotive industries, drives its market, though environmental concerns over phthalates and the shift toward bio-based alternatives present challenges. Geographically, Asia-Pacific dominates production and consumption due to rapid industrialization, while regulatory pressures in Europe and North America influence market dynamics toward safer substitutes.
