## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 2-Methylglutaronitrile competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 2-Methylglutaronitrile (2-MGN) is an organic chemical compound with the molecular formula  $C_6H_8N_2$ . It is a dinitrile derivative consisting of a five-carbon chain substituted with a methyl group at the 2-position and cyano groups at both ends. As a colorless to pale yellow liquid, 2-methylglutaronitrile is mainly used as an intermediate in the production of specialty chemicals, pharmaceuticals, and agrochemicals. It is also a key precursor in the synthesis of diamines such as 2-methylpentamethylenediamine, which are further utilized in the manufacture of polyamides, polyurethanes, and other high-performance polymers. The market drivers for 2-Methylglutaronitrile (2-MGN) are primarily linked to its role as an essential chemical intermediate. Growing demand for high-performance polymers such as polyamides and polyurethanes boosts consumption, since 2-MGN is a key precursor for producing diamines like 2-methylpentamethylenediamine. The expansion of the automotive, electronics, and construction industries further stimulates market growth due to the rising need for durable, lightweight, and high-strength materials. Additionally, the increasing use of specialty chemicals in pharmaceuticals and agrochemicals supports demand, as 2-MGN serves as a versatile building block. Overall, the combination of industrial material innovation and downstream application expansion is driving the market forward.

The global 2-Methylglutaronitrile market size was estimated at USD 824.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
