Report Overview

A 2 Way PVC Ball Valve is a type of industrial valve designed for controlling the flow of fluids in a piping system. It is constructed from polyvinyl chloride (PVC), a thermoplastic material known for its durability, chemical resistance, and cost-effectiveness. This valve operates on a quarter-turn mechanism, allowing for easy and precise control of the fluid flow. The "2 Way" designation indicates that it has two ports, one for the inlet and one for the outlet, facilitating a straightforward linear flow path. The ball within the valve rotates to open or close the passageway, providing a tight seal when closed and minimal resistance to flow when open. This type of valve is commonly used in applications where a high level of control over the flow rate is required, such as in water treatment, chemical processing, and other industries where corrosion resistance and ease of maintenance are important factors.
