Report Overview

A 2D Bar Code, also known as a two-dimensional barcode or matrix barcode, is a graphical representation of data that uses a two-dimensional pattern of squares, dots, or other geometric shapes to encode information. Unlike traditional linear barcodes, which store data in a single direction, 2D barcodes can store data in both horizontal and vertical directions, allowing for a greater amount of information to be encoded in a smaller space. These barcodes are commonly used in various industries, such as logistics, retail, and healthcare, for applications like tracking products, managing inventory, and verifying patient information. Examples of 2D barcodes include QR codes, Data Matrix, and Aztec codes, each with its own unique structure and error correction capabilities.
