Report Overview

3-Methylbenzyl Chloride (CAS 620-19-9) is a specialized organic compound primarily used as an intermediate in the synthesis of pharmaceuticals, agrochemicals, and fine chemicals. It belongs to the class of benzyl halides and is characterized by its chlorine-substituted methylbenzene structure, which makes it reactive for further chemical modifications. The compound is particularly valued in the pharmaceutical industry for its role in producing active pharmaceutical ingredients (APIs) and in agrochemical manufacturing for creating pesticides and herbicides. Its demand is closely tied to the performance of these end-use industries, with strict regulatory oversight due to its hazardous nature. The market for 3-Methylbenzyl Chloride is niche but stable, driven by ongoing R&D in drug development and crop protection solutions, with key production concentrated in regions like China, India, and Europe, where chemical synthesis capabilities are advanced. Pricing and supply are influenced by raw material costs (e.g., toluene and chlorine) and environmental compliance, while competition remains limited to a few specialized manufacturers.
