Report Overview

3-(N-morpholino)propanesulfonic Acid, commonly known as MOPS, is a zwitterionic buffering agent used in various applications, including biological research and pharmaceutical formulations. It is a white crystalline powder with a chemical formula of $C_7H_{15}NO_4S$. MOPS is characterized by its ability to maintain a stable pH in solutions, particularly in the range of 6.5 to 7.9. This buffering capacity makes it suitable for use in biological assays, cell culture media, and other applications where maintaining a consistent pH is crucial. MOPS is also known for its low UV absorbance, which is beneficial in spectroscopic analyses where background interference needs to be minimized. Additionally, its zwitterionic nature contributes to its solubility in water and its resistance to precipitation in the presence of divalent cations, which can be advantageous in certain biochemical processes.
