Report Overview

Diaphragm valve is a shut-off valve that uses a diaphragm as the opening and closing element to close the flow channel, cut off fluid, and separate the valve body cavity from the valve cover cavity. Diaphragms are commonly made of elastic, corrosion-resistant, and non permeable materials such as rubber and plastic. Valve bodies are often made of plastic, fiberglass, ceramics, or metal lining materials. Simple structure, good sealing and anti-corrosion performance, and low fluid resistance. Used for media with low pressure, low temperature, strong corrosiveness, and containing suspended substances. A three channel diaphragm valve is a common industrial valve that has three channels and is typically used to control the flow or mixing of fluids between different channels.
