Report Overview

3D Active Shutter Glasses are a type of 3D eyewear designed to enhance the viewing experience of 3D content, such as movies and video games. These glasses utilize an active shutter technology, which involves rapidly alternating the left and right lenses to synchronize with the display's refresh rate. This synchronization allows each eye to see a slightly different image, creating the illusion of depth and resulting in a more immersive 3D experience. The glasses are typically battery-powered and contain liquid crystal displays in the lenses that darken and clear in sync with the display's left and right image projection. This technology requires a compatible 3D display and can offer a higher resolution and reduced crosstalk compared to other 3D technologies, making it a popular choice for home theater and gaming setups.
