Abstracts

3D printing first got widespread public attention in 2013, when it was specifically mentioned by President Obama in his State of the Union Address. 3D printing is a manufacturing process where an object is created with the help of a layer-by-layer material approach. Each layer can be considered a thin horizontal cross-section of the final product. It uses Computer Aided Design (CAD) i.e. a digital blueprint to create rapid prototypes, spare parts and final products. 3D printing uses materials like thermoplastics, plastic composites, metals, alloys, ceramics etc. 3D printing as an end-use manufacturing technology is still not fully developed but it has the potential to transform the conception, manufacturing and logistics processes.

The global 3D Bioprinting For Life Science R D market size was estimated at USD 1834.75 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.45% during the forecast period.
