### Report Overview

3D light field cameras are cameras that use a single camera and a single master lens to obtain both 2D images and measured and calibrated 3D depth of field information in a single shot. The camera is constructed by adding a special micro-lens array between the camera's main lens and a high-quality sensor. Through the refraction of the lens, the image of the scene can be focused in front of the micro-lens array, through which the gathered image is re-imaged and projected into the high-quality image sensor.
