Report Overview

A 3D MEMS Probe Card is a sophisticated testing tool utilized in the semiconductor industry for probing and testing integrated circuits (ICs) during the manufacturing process. This advanced technology employs Micro-Electro-Mechanical Systems (MEMS) to create a three-dimensional probe array that can make precise contact with the microscopic pads or bumps on an IC. The 3D aspect refers to the probe card's ability to maintain contact with the IC pads at various angles and depths, which is crucial for testing complex, multi-layered chips. The probe card is designed to provide high-speed, high-precision measurements, ensuring the functionality and performance of the ICs before they are integrated into final products. It is an essential component in the semiconductor testing process, enabling manufacturers to identify and rectify defects early in the production cycle, thereby improving yield and reducing costs.
