Report Overview

The 3D Through Wall Radar is a sophisticated surveillance and monitoring device that utilizes advanced radar technology to detect and track objects or individuals through solid barriers such as walls. This product is designed to provide real-time, three-dimensional information about the movements and positions of targets within a specified area, even when direct line-of-sight is obstructed. It employs radio frequency signals that penetrate walls and other solid materials, reflecting off objects to create a detailed image of the environment. The radar system is capable of distinguishing between different types of movements and can be programmed to alert users to specific activities or changes in the monitored area.
