Report Overview

3LCD laser projector is a projection equipment using 3LCD technology and laser light source. In this kind of projector, the light first passes through a special beam splitter and is divided into three basic color beams of red, green, and blue. Then it passes through three LCD panels to control the intensity and color of the light, and finally merges into one again. Full color light for projection. Compared with traditional mercury lamps or LED light sources, laser light sources have longer life, higher brightness and color saturation, and can provide more stable projection effects. 3LCD technology means that three LCD panels (red, green, and blue) are used inside the projector to process different colors of light respectively, which can present more accurate colors and details and avoid the rainbow effect. Therefore, 3LCD laser projectors combine the advantages of 3LCD technology and laser light sources to provide high brightness, high contrast, true color performance and long service life. They are suitable for conference rooms, classrooms, theaters and other places that require high-quality projection effects. .
