Abstracts

3PE Coating Anti-corrosive Steel Pipes refers to 3-layer structural polyethylene-coated anti-corrosion steel pipes. The three layers of this coating include: The first layer is called the corrosion protection layer. This layer is a fused layer of bonded epoxy resin, which provides very good corrosion protection; the second layer is called the copolymer bonding layer. The third layer is for physical protection and is also composed of polyethylene. Because polyethylene and copolymer adhesives are similar, they bond well to each other. Three-layer polyethylene anti-corrosion coating is widely used in pipeline systems transporting oil, gas, water and other fluids due to its good corrosion resistance, water vapor permeability resistance and mechanical properties.

The global 3Pe Coating Anti Corrosive Steel Pipes market size was estimated at USD 2850.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
