### Report Overview

The 400G silicon optical module is a high-speed optical transceiver that leverages silicon photonics technology to achieve data transmission rates of 400 gigabits per second (Gbps). It integrates optical and electronic components on a silicon substrate, enabling compact, energy-efficient, and high-performance connectivity solutions for data centers, telecommunications, and high-performance computing (HPC) applications. These modules support various protocols, including Ethernet and InfiniBand, and are designed to meet the escalating demand for bandwidth driven by cloud computing, 5G networks, AI/ML workloads, and hyperscale data center expansion. Compared to traditional optical modules, 400G silicon-based solutions offer superior scalability, lower power consumption, and cost advantages due to CMOS-compatible manufacturing processes. Key variants include QSFP-DD and OSFP form factors, with applications spanning short-reach (SR), long-reach (LR), and extended-reach (ER) use cases. The technology represents a critical evolution in optical networking, addressing the need for higher density and efficiency in next-generation infrastructure.
