### Report Overview

The 400Hz airport cable is a specialized electrical power cable designed to provide ground power to aircraft while parked at airport gates, enabling onboard systems to operate without relying on the aircraft's auxiliary power unit (APU). These cables are engineered to handle high-frequency 400Hz alternating current (AC), which is the standard frequency for aircraft electrical systems, offering advantages such as reduced weight and improved efficiency compared to traditional 50/60Hz power. They are constructed with durable, flexible materials to withstand harsh environmental conditions, frequent handling, and mechanical stress, ensuring reliable power delivery for avionics, lighting, and climate control systems. Key features include high conductivity, insulation resistance, and compliance with stringent aviation safety standards like IEC 60320 and ISO 6858. The cables are typically used in conjunction with ground power units (GPUs) and are available in various lengths and current ratings to accommodate different aircraft types, from regional jets to wide-body airliners.
