Abstracts

The 4680 large cylindrical battery structural parts are quite different from the square battery structural parts, and are similar to the 2170 small cylindrical battery structural parts. There are three main changes between the 4680 battery structural parts and the 2170 battery structural parts. One is the thermal and electrical separation, the other is the addition of a current collecting plate, and the third is the increase in wall thickness. 4680 large cylindrical power battery structural parts use steel shells. For 4680 batteries, stamping and stretching are still the mainstream production process. However, due to changes in size and materials of 4680, the equipment needs to have greater stamping force and greater The maximum drawing height requires increased processing capabilities of stamping equipment. The industry has high technical barriers, and the full-ear design doubles the complexity of cover welding; high concentration, China Kedali, as a leading enterprise, monopolizes the core process (precision stamping + laser welding), and new entrants face a technical verification cycle of more than 3 years. In 2023, the company has already started mass production and supply. Based on the performance and cost advantages of large cylindrical lithium batteries, many domestic and foreign battery manufacturers and new energy vehicle companies have laid out the technical research and development and production line construction of large cylindrical lithium batteries such as 4680. Among them, Tesla, as a key role in promoting the installation of large cylindrical batteries, will significantly increase the installed capacity of 4680 batteries for its own supply in 2024. At the same time, the BMW Group announced in February 2025 that BMW's innovative large cylindrical batteries will be installed in 2025, and the new car will be equipped with BMW's sixth eDrive electric drive system. Domestic and foreign 4680 large cylindrical projects have been successively increased in production and put into mass production. Combined with the breakthroughs and follow-up of large cylindrical battery technology routes by international car companies represented by Tesla and BMW, this may bring a new

round of large cylindrical battery development opportunities and drive the growth of 4680 battery structural parts.

The global 4680 Battery Structure Components market size was estimated at USD 261.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.30% during the forecast period.
