Report Overview

A 4k curved monitor is a display that has the same resolution as a regular 4K UHD TV, but it's not quite the same. The main difference between these two types of displays is their size and shape. While both have 3840 x 2160 pixels (8 million pixels), they differ in terms of screen size and aspect ratio. For example, while most TVs are flat screens with 16:9 or 16:10 aspect ratios, monitors usually come in different shapes such as square or rectangular ones with 21:9 aspect ratios ? which means that they can be wider than usual without being too tall to fit on your desk.
