Report Overview

5G Satellite communication is simply the communication between radio communication stations on the earth (including the ground and lower atmosphere) using satellites as relays. The satellite communication system is composed of satellite and earth station. The characteristics of satellite communication are: large communication range; as long as it is within the range covered by the radio waves emitted by the satellite, communication can be performed from any two points; it is not easily affected by land disasters (high reliability); as long as the earth station circuit is installed It can be opened immediately (open circuit quickly); at the same time, it can be received in multiple places, which can realize broadcast and multiple access communication economically (multi-access feature); the circuit setting is very flexible, and the excessively concentrated traffic can be dispersed at any time; the same channel can be used for Different directions or different intervals (multiple access).
