## Abstracts

The 77GHz millimeter wave radar chip is a high-frequency chip designed for automotive radar systems, with an operating frequency range of 76GHz to 81GHz. This chip transmits and receives millimeter wave signals and uses the principle of electromagnetic wave reflection to accurately measure the distance, speed and direction of target objects, providing key environmental perception data for autonomous driving and advanced driver assistance systems (ADAS). As autonomous driving technology evolves from Level 2 to Levels 3/4, the demand for high-precision, long-range sensing capabilities increases significantly. The 77GHz millimeter-wave radar, with its all-weather operation, strong anti-interference, and long detection range (>200 meters), has become one of the core sensors in this field, leading to a sustained rise in market demand. Simultaneously, China has allocated the 76-79GHz frequency band specifically for automotive radar applications, while Europe and the United States are also promoting the standardization of the 77GHz frequency band through regulations. These policy supports not only accelerate the technological transition from 24GHz to 77GHz radar but also expand market demand by standardizing radio management and clarifying the mainstream role of 77GHz radar in intelligent driving. The combined forces of technological advancement and policy support have further solidified the market's growth trajectory, making the 77GHz millimeter-wave radar a critical component in the autonomous driving ecosystem. Thereby expanding the demand for chips.

The global 77GHz mmWave Radar Chip market size was estimated at USD 650.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.30% during the forecast period.
