Report Overview

The 90° machining unit angle head is a specialized attachment for CNC milling machines, lathes, and machining centers, designed to enable perpendicular machining operations in tight or hard-to-reach spaces where standard spindle access is limited. It redirects the tool axis by 90 degrees, allowing for side milling, drilling, tapping, and other precision operations without repositioning the workpiece. These units are widely used in industries such as aerospace, automotive, mold-making, and medical device manufacturing, where complex geometries and multi-axis machining are required. The angle head enhances machining flexibility, reduces setup time, and improves productivity, making it a critical tool for high-precision applications. Key variations include fixed and adjustable models, driven by gears or belts, with options for coolant-through capabilities and high-speed performance to meet diverse industrial demands.
