Report Overview

Cysteamine Hydrochloride is a chemical compound with the molecular formula $C_2H_7NS.HCl$, which is a derivative of the amino acid cysteine. It is a white crystalline powder that is soluble in water. This compound is primarily used as a pharmaceutical intermediate, playing a crucial role in the synthesis of various drugs, particularly those targeting cystinosis, a rare genetic disorder that affects the kidneys and other organs. Cysteamine Hydrochloride functions by breaking down cystine, the amino acid that accumulates in the body of individuals with cystinosis, thus helping to manage the condition. The 95% purity grade indicates that the product contains 95% of the active ingredient, Cysteamine Hydrochloride, with the remaining 5% being other substances that are typically inactive or inert fillers. This high purity is essential for ensuring the effectiveness and safety of the compound when used in pharmaceutical applications.
