Report Overview

AAV ELISA Kits are diagnostic kits designed to measure the levels of adeno-associated virus (AAV) in a patient's biological samples, including blood, serum, and tissue. AAV is a non-pathogenic virus that has been used extensively as a gene therapy vector because of its stable integration into the human genome. These ELISA (Enzyme-Linked Immunosorbent Assay) kits use specific antibodies that bind to the AAV capsid protein, allowing for the detection and quantification of AAV particles in the sample. The results of the AAV ELISA test can be used to monitor the efficacy of gene therapy and evaluate the immune response to AAV vectors.
