Abstracts

AAV vector-based gene therapy drugs are a class of therapeutic agents used in the treatment of genetic disorders and certain diseases. These drugs utilize AAV vectors, which are small, non-enveloped viruses that have a low pathogenic profile and are capable of delivering genetic material into host cells. The genetic material, which can be a functional gene or a therapeutic gene, is inserted into the AAV vector and then introduced into the patient's cells, where it is intended to correct genetic mutations or produce therapeutic proteins. AAV vector-based gene therapy has shown promising results in clinical trials for conditions such as Leber congenital amaurosis, spinal muscular atrophy, and certain retinal diseases.

The global Aav Vector Based Gene Therapy Drugs market size was estimated at USD 1235.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.45% during the forecast period.
