Report Overview

Abdominal drainage kits are specialized medical devices designed to facilitate the removal of excess fluids, such as blood, pus, or serous fluid, from the abdominal cavity following surgical procedures or in cases of trauma or infection. These kits typically include components such as drainage tubes, collection bags, trocars, sutures, and sometimes suction devices, ensuring efficient fluid evacuation while minimizing infection risks. The market for abdominal drainage kits is driven by the rising number of abdominal surgeries, including laparoscopic and open procedures, as well as the increasing prevalence of conditions like peritonitis, ascites, and post-operative complications.
