Report Overview

Abiraterone API, or Abiraterone Acetate Active Pharmaceutical Ingredient (API), is a chemical compound that serves as the primary active component in the formulation of Abiraterone Acetate, a medication used in the treatment of metastatic castration-resistant prostate cancer. This API is a selective and potent inhibitor of the enzyme cytochrome P450 17A1 (CYP17), which plays a critical role in the synthesis of androgens, including testosterone. By inhibiting CYP17, Abiraterone API effectively reduces the production of androgens, thereby helping to control the growth of prostate cancer cells that rely on these hormones for survival and proliferation. The API is typically manufactured under strict quality control standards to ensure its purity, potency, and consistency, which are essential for its efficacy and safety when used in pharmaceutical formulations.
