Report Overview

An above 12kW ultra-high power laser cutting machine is an advanced industrial tool used for cutting thick metal sheets and plates with exceptional speed, precision, and efficiency. Unlike lower-power laser cutting machines, which are typically used for thinner materials, ultra-high power laser cutting machines utilize laser sources with power levels exceeding 12 kilowatts, enabling them to cut through thick materials with ease. These machines employ fiber laser technology, which generates a concentrated and intense laser beam capable of rapidly heating and vaporizing metal, resulting in clean and precise cuts. Above 12kW ultra-high power laser cutting machines are employed in industries such as automotive, aerospace, shipbuilding, and heavy equipment manufacturing, where thick metal components are common. They offer several advantages over conventional cutting methods, including faster processing speeds, reduced heat-affected zones, minimal material waste, and the ability to cut complex shapes and contours with high accuracy. Additionally, these machines are often equipped with advanced features such as CNC (Computer Numerical Control) systems, automatic material handling systems, and real-time monitoring and control capabilities, allowing for highly automated and efficient cutting processes.
