Report Overview

An Abrasive Cut Off Wheel is a specialized tool utilized in various industries for cutting, shaping, and trimming materials. It is primarily composed of a central hub, a steel or aluminum body, and an outer layer of abrasive material, such as aluminum oxide or silicon carbide grains, which are bonded together to form a grinding surface. The wheel is designed to be mounted on a power tool, such as an angle grinder or cut-off machine, and is used for tasks that require precision cutting of metals, stones, ceramics, and other hard materials. The abrasive grains on the wheel's surface erode and wear away the material being cut through friction and pressure, allowing for clean and efficient cuts. The choice of abrasive type and wheel size is crucial for achieving optimal performance and safety, as it directly affects the cutting speed, tool life, and the quality of the cut.
