Report Overview

Absorbable Bioactive Bone is a medical product designed to facilitate bone repair and regeneration. It is a synthetic, biocompatible, and biodegradable material that mimics the properties of natural bone. This product is engineered to promote the growth of new bone tissue by providing a scaffold for cells to attach, proliferate, and differentiate. As the new bone tissue forms, the Absorbable Bioactive Bone gradually degrades and is replaced by the patient's own bone, thus eliminating the need for a second surgery to remove the implant. It is commonly used in orthopedic and dental procedures to fill bone defects, enhance fusion in spinal surgeries, and support bone healing after fractures or dental extractions. The product's bioactivity ensures that it not only provides structural support but also actively participates in the bone healing process, making it an integral part of regenerative medicine.
