Spacers are an effective technique to reduce the side effects of prostate radiotherapy. They protect the rectum during radiotherapy treatment by moving it away from the prostate gland. Studies have shown that patients experience fewer bowel-related, urinary, and erectile dysfunction side effects and improved quality of life compared with those who don't have a spacer inserted. The absorbable spacer is injected during a simple one-off procedure and is gradually absorbed and eliminated naturally from the body through your urine.

The global Absorbable Tissue Spacer for Prostate Radiotherapy market size was estimated at USD 192.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.10% during the forecast period.
