Abstracts

AC constant current micro-resistance tester is a special test equipment for measuring tiny resistance values. It uses an AC constant current source as an excitation source, applies a constant AC current to the resistor being measured, and measures the voltage drop across it to calculate the resistance value. Due to the use of an AC constant current source, this tester can effectively eliminate the influence of temperature changes, contact resistance, lead resistance and other factors on the measurement results, so it has high measurement accuracy and stability.

The global Ac Constant Current Microresistance Tester market size was estimated at USD 45.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
