Report Overview

The AC Cross Flow Fan is a type of axial flow fan that is specifically designed for applications requiring high air volume and low pressure. It operates on alternating current (AC) power, which is the standard electricity supply in most residential and commercial settings. The fan's design features a cross flow configuration, where the air intake and exhaust are positioned perpendicular to the fan's axis, allowing for efficient air movement across the fan's surface. This design is particularly beneficial in scenarios where space is limited, and a compact yet powerful fan is required.
