Abstracts

An AC surge protector (SPD) is a safety device designed to protect AC electrical systems and their connected devices from voltage surges. It directs excess voltage energy to the ground or a safe release path through a fast response mechanism, thereby preventing these high-energy pulses from damaging electrical equipment. AC surge protectors are widely used in residential, commercial, and industrial environments, including distribution boards, critical load terminals, and interfaces with sensitive electronic equipment. They can effectively protect against transient voltage fluctuations caused by lightning strikes, power system switching operations, or the start-up of large electrical appliances, ensuring the stability and safety of power supply. In the future, the development trend of AC surge protectors will focus on improving performance and intelligence, and pay attention to environmental protection and sustainability. First, in terms of technology, manufacturers are developing products with lower residual voltage, faster response time and stronger current resistance to provide higher levels of protection. At the same time, with the development of Internet of Things (IoT) technology, intelligent AC surge protectors will integrate real-time monitoring and data analysis functions, support remote monitoring and automatic alarm, so that users can understand the status of the equipment in a timely manner and take preventive measures, significantly improving maintenance efficiency and system reliability. Secondly, increasingly stringent environmental regulations have prompted manufacturers to adopt more environmentally friendly materials and production processes to reduce the environmental footprint of the product life cycle. In addition, modular design and standardized interfaces will become mainstream, facilitating installation, upgrading and maintenance, adapting to the needs of different application scenarios, and promoting the green transformation and technological progress of the entire industry. These developments not only enhance the safety of electrical systems, but also provide support for achieving efficient energy management and sustainable

development goals.

The global AC Surge Protection Device market size was estimated at USD 1258.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
