Abstracts

Accelerator Mass Spectrometry (AMS) service is a specialized analytical technique used for radiocarbon dating and isotopic analysis of samples with extremely low concentrations of isotopes. Unlike conventional mass spectrometry, AMS can accurately measure isotopic ratios at trace levels by accelerating ions to high energies using a particle accelerator. This allows for the precise determination of isotopic abundances and the detection of isotopes at concentrations as low as parts per trillion. AMS service providers offer expertise and instrumentation for radiocarbon dating of archaeological artifacts, geological samples, and environmental materials, as well as isotopic analysis for studies in fields such as geoscience, archaeology, anthropology, and environmental science. AMS services enable researchers to obtain accurate and reliable data on the age and composition of samples, contributing to a better understanding of past environments, human history, and natural processes.

The global Accelerator Mass Spectrometry Ams Service market size was estimated at USD 150.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
