Report Overview

Acid Mannanase is a type of enzyme that belongs to the class of carbohydrases, specifically glycoside hydrolases. It is responsible for breaking down mannan, a complex polysaccharide composed of mannose sugar units, into simpler sugars. This enzyme is particularly effective in acidic environments, which is indicated by the term "acid" in its name. Acid Mannanase is utilized in various industrial applications, such as food processing, animal feed, and biofuel production, where it aids in the degradation of mannan-containing materials to release fermentable sugars. Its ability to function in acidic conditions makes it suitable for use in processes that involve low pH levels, enhancing its versatility in industrial settings.
