Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Acotiamide API competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Acotiamide API is a selective acetylcholinesterase inhibitor and gastric motility modulator, chemically designated as N-[2-(diisopropylamino)ethyl]-2-[(2-hydroxy-4,5-dimethoxyphenyl)methylthio]acetamide hydrochloride. It treats functional dyspepsia (FD) and gastroparesis by enhancing gastric fundus relaxation and accelerating emptying, improving postprandial fullness, early satiety, and epigastric pain with high target specificity and low CNS penetration. The API must meet USP/EP standards, requiring multi-step synthesis (e.g., thioetherification, amine protection/deprotection) with strict controls on purity (>99%), residual solvents, and polymorphism. The acotiamide API market is fueled by rising functional dyspepsia prevalence (~10-20% adults globally) and demand for prokinetic drugs, with generic API production expanding post-patent expiry (originator: Zeria Pharma). Chinese/Indian API manufacturers are scaling up with cost advantages but face challenges in polymorph patents and impurity control. Future trends include: 1) Extended-release formulations; 2) Fixed-dose combinations (e.g., with PPIs) for indication expansion; 3) Improved access in emerging markets (SE Asia, Latin America). Tighter regulations (e.g., FDA DMF reviews) may delay generic approvals.

The global Acotiamide API market size was estimated at USD 128.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.90% during the forecast period.
