### Report Overview

Acrylic-styrene-based redispersible polymer powder (RDP) is a free-flowing, white powder produced by spray-drying a copolymer dispersion of acrylic and styrene monomers. It is widely used in construction materials such as tile adhesives, self-leveling compounds, exterior insulation finishing systems (EIFS), and cementitious renders due to its ability to enhance flexibility, adhesion, water resistance, and workability. When mixed with water, RDP redisperses into a stable emulsion, forming a polymer film upon drying that improves the mechanical properties and durability of cement-based or gypsum-based formulations. The product's key advantages include improved cohesion, reduced shrinkage, and increased impact resistance, making it a preferred additive in modern construction applications. The market for acrylic-styrene-based RDP is primarily driven by the growing demand for high-performance construction materials, particularly in emerging economies with rapid urbanization and infrastructure development. Additionally, increasing focus on sustainable and energy-efficient buildings has further boosted its adoption, as it contributes to the longevity and performance of insulation systems and thin-bed mortars. However, the market faces challenges such as fluctuating raw material costs (e.g., styrene and acrylic monomers) and competition from alternative binders like vinyl acetate-ethylene (VAE) copolymers. Regional demand is strongest in Asia-Pacific, led by China and India, due to large-scale construction activities, while Europe and North America remain steady markets with stricter regulations promoting advanced building materials. Key players in the industry are investing in R&D to develop eco-friendly formulations with lower VOC emissions and improved performance characteristics to align with global sustainability trends. The market is expected to grow at a moderate CAGR over the next decade, supported by infrastructure investments and technological advancements in polymer-modified

construction materials.
