Abstracts

Breathable protective clothing is a type of skin protective equipment used by military and civilians that can pass through air and moisture, but can prevent external toxic gases, droplet poisons, bacteria and radioactive dust from harming the human body. After nearly a century of development, relatively mature breathable anti-virus clothing has been developed in various countries, most of which are made of activated carbon adsorption materials. Although this activated carbon adsorption material has good protective performance, it also has problems such as non-selective adsorption, poor protection against large poison droplets, and easy generation of secondary pollution. This report mainly studies in activated carbon protective clothing.

The global Activated Carbon Protective Clothing market size was estimated at USD 350.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
