Report Overview

Activated sludge treatment systems, which involve liquid-solid separation by using a physical membrane barrier instead of traditional gravity clarification, improve treatment performance and consistency. The technology complements our anaerobic technology with aerobic polishing of anaerobically pretreated wastewater and can also be used as a stand-alone process. The MBR can treat wastewater from a wide range of industries. The long solids retention time of the MBR system and the physical membranes work in concert to provide more consistent organic matter, ammonia and nitrogen removal than conventional activated sludge systems. The process discharges negligible concentrations of biochemical oxygen demand (BOD) and total suspended solids (TSS).
