Report Overview

Active Biological Bone Products refer to a category of medical products that are derived from biological sources, such as human or animal bones, and are specifically designed to promote bone healing and regeneration. These products are typically processed to retain their biological activity, which includes factors that stimulate bone growth and integration. They can be used in various orthopedic and dental procedures, such as bone grafts, to enhance the body's natural healing process. Active Biological Bone Products are often sterilized and may be combined with other materials, like ceramics or polymers, to create composite grafts that offer both structural support and biological stimulation. The use of these products aims to reduce healing time, improve graft success rates, and provide a more natural restoration of bone function.
