### Report Overview

Active Copper Cables (ACCs) are high-speed data transmission cables that integrate active electronics, such as signal conditioning or amplification components, within the cable assembly to enhance performance over longer distances compared to passive copper cables. Primarily used in data centers, high-performance computing, and networking applications, ACCs support protocols like Ethernet, InfiniBand, and Fibre Channel, offering a cost-effective alternative to optical fiber while maintaining low latency and power efficiency. These cables are designed to mitigate signal degradation and electromagnetic interference (EMI), making them suitable for high-bandwidth environments where reliable connectivity is critical. The market for ACCs is driven by increasing demand for faster data transfer speeds, the expansion of cloud computing, and the deployment of 5G networks, though competition from optical solutions and advancements in wireless technologies pose challenges.
