### Report Overview

Active Direct Attach Cables (DACs) are high-speed, cost-effective interconnect solutions used in data centers and high-performance computing environments to facilitate short-distance communication between networking equipment such as switches, routers, and servers. These cables integrate fixed transceivers on either end, eliminating the need for separate optical modules, which reduces both latency and power consumption. DACs are typically available in copper or hybrid copper-fiber variants, supporting protocols like Ethernet, InfiniBand, and Fibre Channel, with speeds ranging from 10Gbps to 400Gbps. Their plug-and-play design simplifies deployment and maintenance, making them a preferred choice for enterprises seeking reliable, low-latency connectivity within racks or adjacent cabinets. The growing demand for hyperscale data centers, cloud computing, and 5G infrastructure has driven adoption, though the market faces competition from optical transceivers in longer-distance applications. Key players include manufacturers like Cisco, Arista Networks, and H3C, with innovations focusing on higher bandwidth and energy efficiency.
