Abstracts

Active metadata management is a new form of data management in which active metadata is used to provide clear, understandable business insights to drive informed business decisions. Proactive metadata is a key factor for enterprises to improve the efficiency of data-driven decision-making and planning. Metadata is data that describes data. Traditional data catalogs contain passive metadata, that is, data that is not actively used by users unless started, and includes models and schemas. This is where active metadata comes in. Active metadata enriches passive metadata to improve data cataloging and data management. It manages metadata for operational purposes. Traditional metadata management platforms focus on organizing and storing metadata, including an organization's data. Proactive metadata management introduces an ?analytics? component to this data, helping data users analyze metadata and gain valuable and reasoned insights through automation. Simply put, metadata management connects technical, business and operational data, and when artificial intelligence and machine learning are integrated into this relationship, proactive metadata management is born. Active metadata management platforms also have machine learning components to ensure resource allocation, capacity monitoring, and more. It also supports real-time collaboration.
