Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Active Metal Brazed (AMB) Substrates competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Active metal brazing is a form of brazing which allows metal to be joined to ceramic without metallization. AMB substrate is bonded by the reaction of ceramic and brazing paste containing active metal elements under high temperature. The global key manufacturers of AMB Ceramic Substrate include Rogers Corporation, Ferrotec, BYD, Toshiba Materials, Heraeus Electronics, Denka, Proterial and Mitsubishi Materials, etc. In 2023, the global top eight players had a share approximately 85% in terms of revenue. Currently the AMB ceramic substrates are mainly produced in Japan, Germany and China, which account for 27.3%, 24.56% and 43.5% of the market share respectively in 2023. It is expected that China's production share will reach 57% in 2030. As NGK Electronics Devices and Ferrotec have started or built factories to produce AMB in Malaysia, Southeast Asia is expected to play an important role as a production base in the next few years. Judging from the current manufacturers and production capacity, there are already signs of overcapacity. The current competition is very fierce, resulting in a significant decline in the price of AMB ceramic substrates this year. It is expected that the AMB substrate market will have great potential in the future, but it is still full of risks.

The global Active Metal Brazed (AMB) Substrates market size was estimated at USD 526.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.50% during the forecast period.
