### Report Overview

Active Rubber Powder is a specialized form of recycled rubber material that has undergone a process of activation to enhance its properties. This product is derived from waste rubber sources such as tires, which are ground into fine particles. The activation process involves subjecting the rubber particles to specific treatments, such as chemical or thermal methods, to improve their performance characteristics. The resulting Active Rubber Powder exhibits enhanced flexibility, durability, and bonding capabilities, making it suitable for various applications in the manufacturing industry.
