Report Overview

Adeno-Associated Virus (AAV) Packaging Service refers to a specialized service that provides the packaging of genetic material into AAV vectors. AAVs are commonly used in gene therapy and gene delivery applications due to their ability to efficiently deliver genetic material to target cells. However, AAV vectors need to be packaged with the desired genetic cargo before they can be used for research or therapeutic purposes. The AAV packaging service allows researchers and pharmaceutical companies to obtain high-quality AAV vectors without the need for extensive expertise or infrastructure for vector production. It enables efficient and reliable delivery of genetic material, facilitating various applications in gene therapy, gene editing, and gene expression regulation.
