Abstracts

Bandages are commonly used for minor cuts, wounds, and abrasions to protect the injured area and aid in the healing process. There are various types of adhesive bandages available, each with its own characteristics and applications. General Adhesive Bandages: These are the traditional, fabric or plastic strips with a gauze pad in the center and an adhesive backing. They are widely available in pharmacies and stores, commonly known as "band-aids" or adhesive bandages. Liquid Adhesive Bandages: Liquid adhesive bandages come in liquid form and are applied directly to the wound. They often create a protective, flexible barrier that adheres to the skin. Spray-Type Adhesive Bandages: Spray-type adhesive bandages are applied by spraying a liquid over the wound area. The liquid forms a protective film as it dries. Hydrocolloid Adhesive Bandages: Hydrocolloid adhesive bandages are made of a gel-forming material that creates a moist environment over the wound. They are often thicker and more absorbent than traditional bandages. The core manufacturers of global Adhesive Bandage Products include Johnson & Johnson, Beiersdorf, Medline Industries, 3M, ASO Medical and Yunnan Baiyao, etc. The top three manufacturers account for approximately 32% of the global share. The Asia-Pacific region is the world's largest market, accounting for nearly 36% of the market share. In terms of type, general adhesive bandages occupy a dominant position, accounting for 65% of the market share. At the same time, in terms of application, home use is the largest application field, accounting for 85%.

The global Adhesive Bandage Products market size was estimated at USD 2485.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
