### Report Overview

Adhesive Three-Layer Flexible Copper Clad Plate is a type of advanced material used in the manufacturing of printed circuit boards (PCBs) and flexible circuits. This product consists of three distinct layers: a base layer made of flexible substrate material, a middle layer of adhesive, and an outer layer of copper foil. The flexible substrate, often made from materials like polyimide or polyester, provides the necessary flexibility and durability for the product. The adhesive layer, which can be made from various types of adhesives such as epoxy or acrylic, acts as a bonding agent between the substrate and the copper layer. The copper layer, which is the outermost layer, is essential for electrical conductivity and is used to create the circuitry patterns. This three-layer structure allows for the creation of flexible, durable, and high-performance circuits that can be used in a wide range of applications, including electronics, telecommunications, and automotive industries.
