### Report Overview

Adsorption blood purifier is a medical device used to treat acute and chronic poisoning, liver failure, sepsis and other conditions. Its working principle is to introduce the patient's blood into the adsorption column through hemodialysis or hemoperfusion, and the adsorption column is filled with high-efficiency adsorption materials such as activated carbon or specific resins. These materials can specifically adsorb harmful substances in the blood, such as toxins, metabolic waste, bacterial toxins and inflammatory mediators. The purified blood is then returned to the patient's body to achieve the effect of removing harmful substances, alleviating symptoms and improving prognosis.
